Connection Settings Performance Security

General behaviour and characteristics

- ☒ This server supports folders within folders (see help)
- ☒ Always connect to this profile when Pegasus Mail starts up
- ☒ Make this definition's INBOX folder the default new mail folder
- ☐ Periodically update the INBOX view every 1200 seconds

When deleting messages from folders in this mailbox...

- ☐ Move them to an IMAP folder called Trash
- ☒ Move them to the local deleted messages folder if active
- ☐ Delete them immediately and do not keep a safety copy

IMAP cache management

- ☐ Automatically clear the IMAP header cache on disconnection
- ☒ Automatically clear the IMAP body cache on disconnection

IMAP Mailbox settings

Connection Settings Performance Security

Connection management

- ☐ Mailbox is accessed exclusively by this copy of Pegasus Mail
- ☒ Keep a utility connection open when this definition is active

Folder status handling

- ☐ Only get folder status for INBOX when connecting
- ☐ ... and also get status for any subscribed folders

Folder list handling

- ☒ Use fast folder listing commands
- ☐ List only subscribed folders in this mailbox

The options on this page control the way Pegasus Mail uses the IMAP protocol in an advanced manner, and some of them involve trade-offs with other functionality in the program. Please read the help carefully before using any of these options.

Connection Settings Performance Security

SSL/TLS (encrypted data stream) settings

Use SSL/TLS security on this connection -

- ☐ Never
- ☒ Via STARTTLS
- ☐ Via direct SSL connect

- ☐ Enable server certificate fingerprint tracking
- Current certificate fingerprint:
- ☐ Disable certificate validation (warning: read help before using this)
- ☐ Only use SSLv3 (needed for Mercury v4.74 and earlier servers)

Connection security is an important, but complex area, and it is important that you understand the issues involved. Please read the help on this section carefully before using these options.
